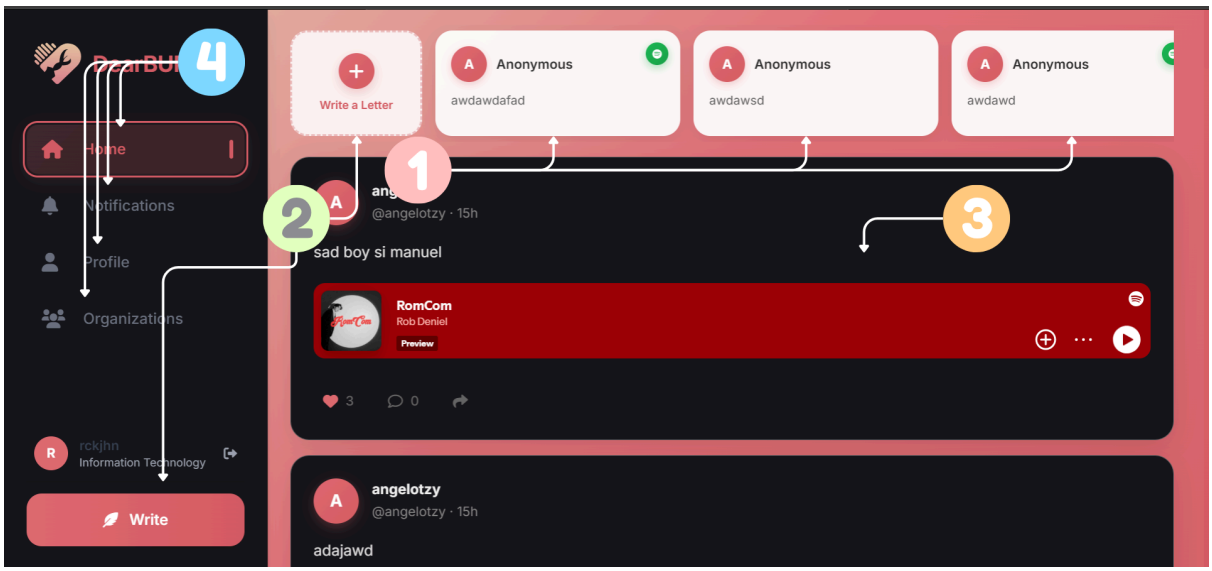
DearBUP
Feel. Write. Share.

Week 12: Phase 3: Frontend Development

DearBUP: FRONTEND WORKING PAGES

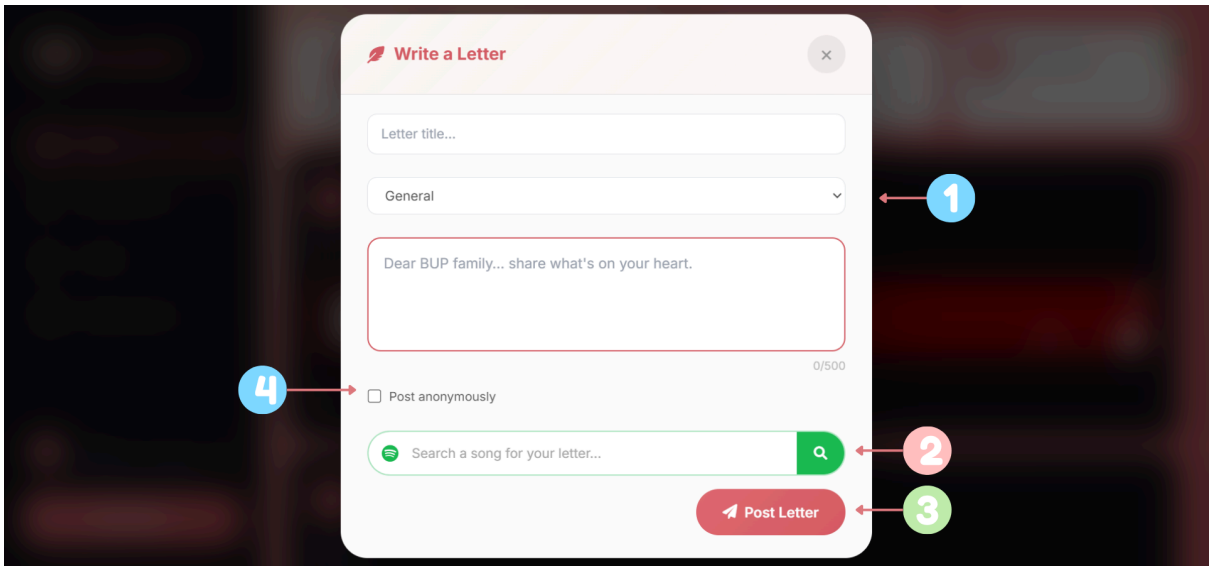
HOME PAGE



Annotations

UI Component	Feature Description	Primary Use Case
1. **Letter Rail**	Small Cards on top	Allows students to scroll through stories, status updates without committing to a full read.
2. **Write a letter**	Prominent add letter button	The dual placement ensures the user doesn't have to look far to start sharing.
3. **Main Feed**	A large card with a sample post and hashtags	Allowing for interaction (reply, like, view count).
4. **Sidebar Navigation**	Vertical menu with Home, Notifications, Profile, and Organizations.	To jump between social interactions and account management.

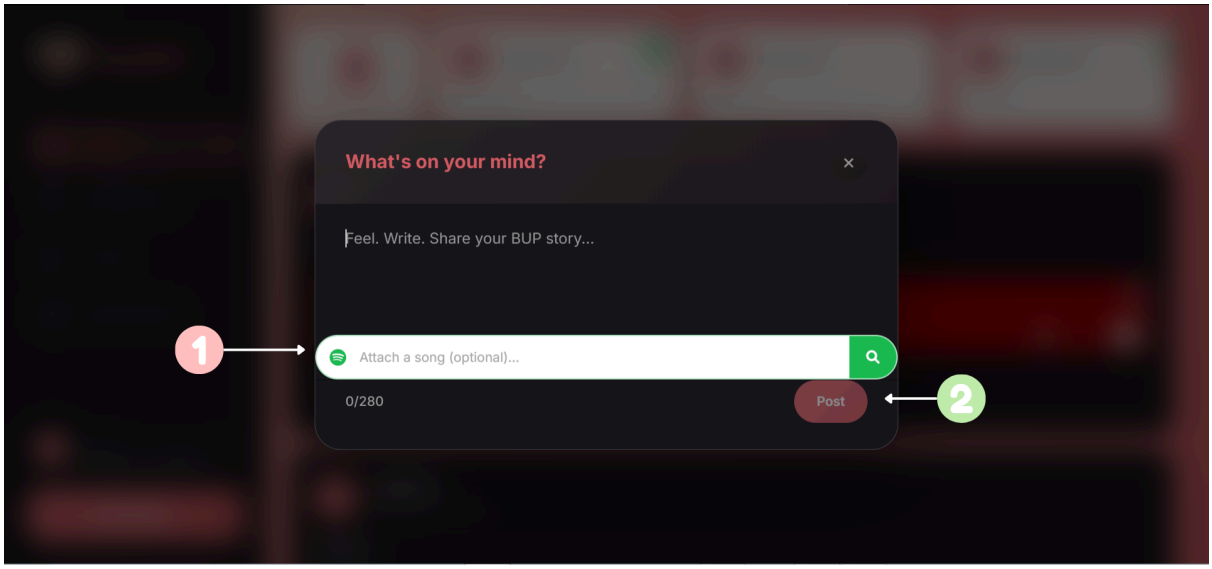
CREATE STORY



Annotations

UI Component	Feature Description	Primary Use Case
1. **Category Selector**	A dropdown button	Allow users to add a category in which their letters belong to.
2. **Spotify Search Integration**	API-linked search bar with Spotify branding.	Allows the writer to set a "soundtrack" to their feelings.
3. **Post Letter Action**	High-contrast button with a "Post letter" icon.	Sending a physical letter or "confession."
4. **Anonymous box**	A checkbox	Allow users to hide their identity when posting something they are not confident to post.

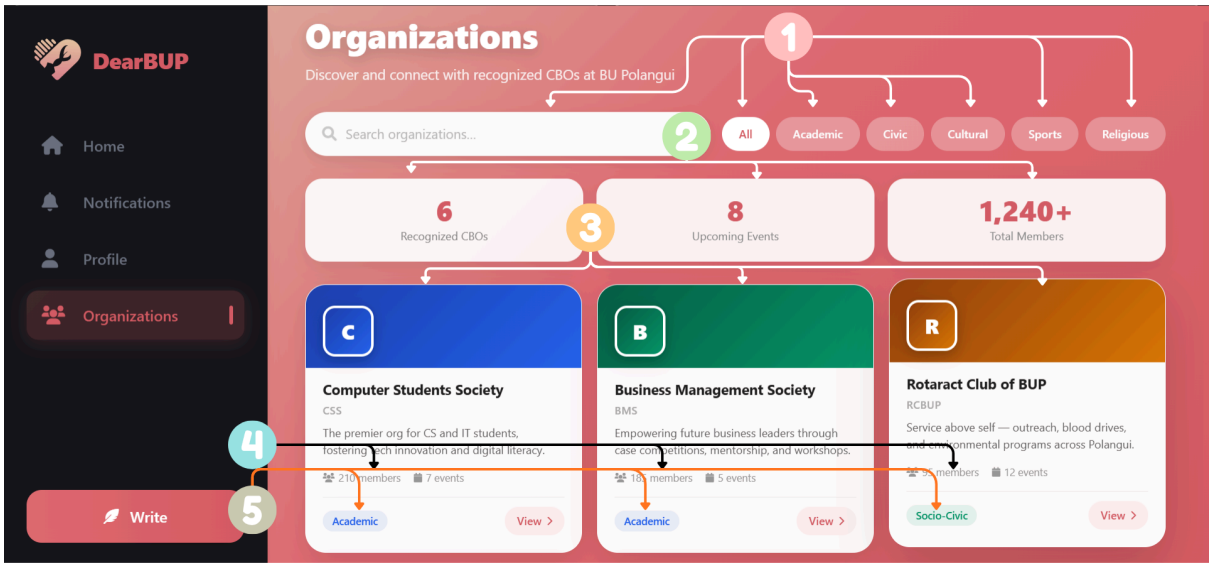
REATE POST



Annotations

UI Component	Feature Description	Primary Use Case
1. **Attach a song**	Spotify search a song feature	For sharing a post with an associated song
2. **Primary Button**	Small, standard action button	Makes posting feel like a low-pressure

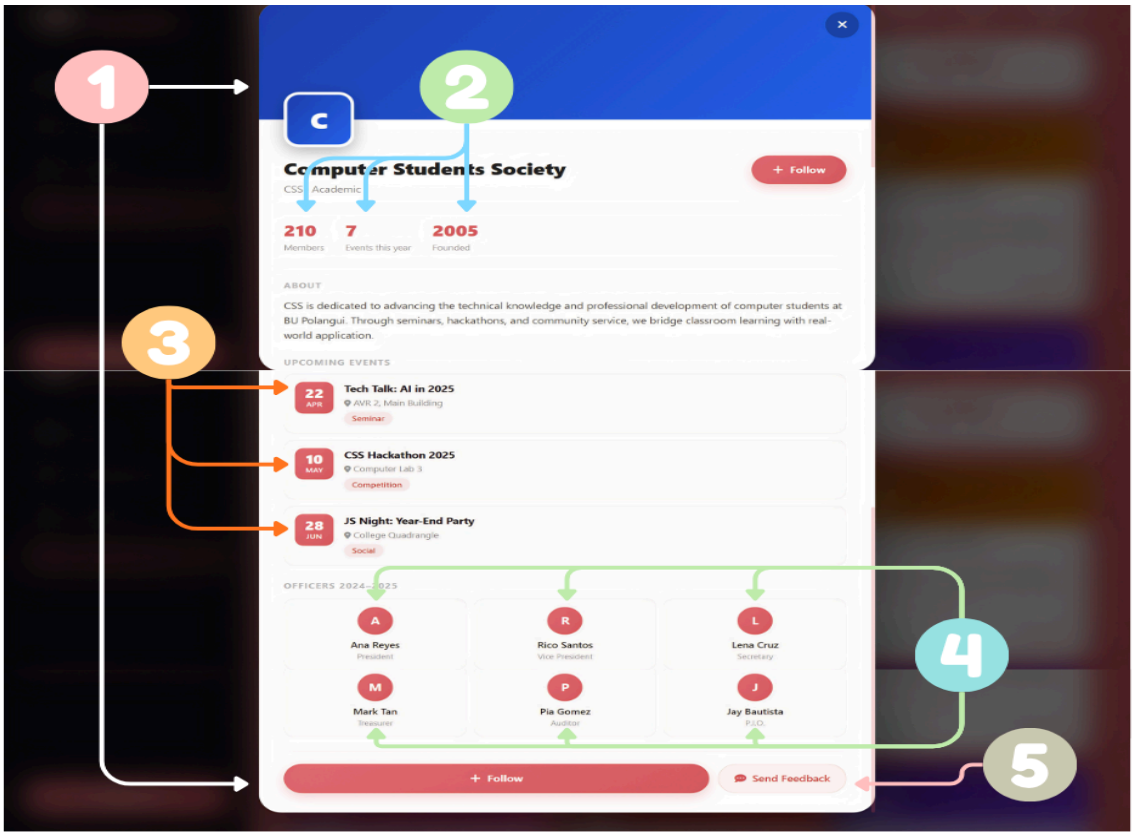
ORGANIZATION HOME PAGE



Annotations

UI Component	Feature Description	Primary Use Case
1. **Search & Category**	Dynamic filtering by name or niche	A freshman knows they want a "Sports" club but doesn't know the name; they use the pills to narrow down options instantly.
2. **Level Metrics**	3-column stats bar	Gives the user a "bird's-eye view" of how active the campus community is.
3. **Org Card Header**	Vibrant top-banners with letter avatars.	Helps users distinguish between different organizations.
4. **Engagement Snippets**	Member counts and event totals on each card.	Users can see which clubs are "active" versus "dormant" before clicking "View."
5. **Category Badges**	Small labels at the bottom left of cards.	Confirms the organization's primary focus to ensure it aligns with the user's interests.

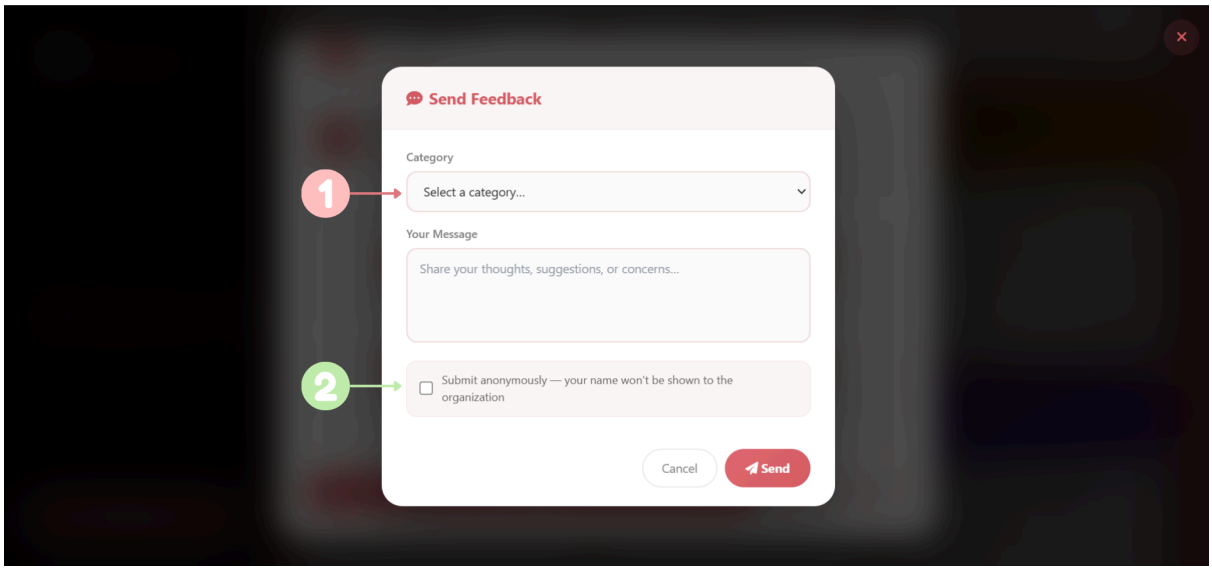
ORGANIZATION DETAILS PAGE



Annotations

UI Component	Feature Description	Primary Use Case
1. **Org Profile Header**	Banner, Avatar, and "+ Follow" Button.	Allows a user to "subscribe" to club updates to stay informed without manual searching.
2. **Statistics**	Member count, Event count, and Year Founded.	Helps a student judge if a club is a "startup" or an established campus pillar
3. **Upcoming Events**	Date-stamped cards	User checks this to see activities of each org.
4. **Officer Directory**	Grid of cards with roles	Allows students to know exactly who to look for on campus if they have specific questions.
5. **Feedback Button**	Light colored button	Students can report concerns or suggest events without fear

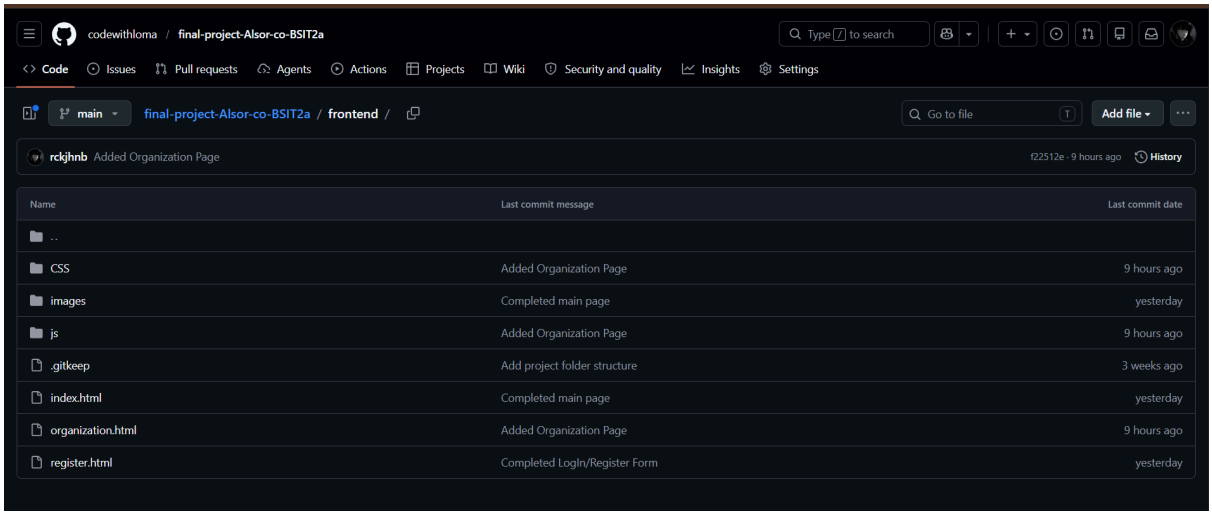
FEEDBACK PAGE



Annotations

UI Component	Feature Description	Primary Use Case
1. **Category Dropdown**	Structured Data Entry	Organizes student input so club leaders can prioritize urgent complaints vs. general suggestions.
2. **Anonymous Checkbox**	Safety-First Interaction	Protects the student's identity, encouraging honest feedback about sensitive campus or organizational issues.

GitHub Folder Structure



REFLECTION

James P. Espinosa | Project Manager | Document Officer

My role starts by ensuring that our frontend is functioning and complete with the needed pages or the important ones. After that, I have to check the display if it is working and synced in my repository. I start to capture through screenshot our working pages and check its features and define what is the corresponding use case for it. I edited the images and labeled it by number for the visibility and cleanliness of our output. In the end I compile all of our reflection papers in this document.

Ivan Jacob Milan | Backend Developer

I updated the backend to use Nodemailer for a secure OTP authentication system and it limits registration to bicol-u.edu.ph emails. I also finalized the Letters, Posts, and Feedback modules, specifically developing the Letter logic to sync Spotify metadata with anonymous messages. Finally, I audited all RESTful API endpoints to ensure stable data flow and secure error handling across the entire system.

Manuel Angelo Loma | GitHub Manager

I focused on my role as the GitHub Manager by ensuring our repository remained well-organized and up to date. I managed the folder structures and monitored all file uploads to maintain a clean version history for the team. Beyond repository management, I also collaborated with our frontend developer to organize the frontend structure and refine the project's design by contributing ideas, user-friendly interface. My contributions this week prioritized keeping our workflow structured and our development progress consistent.

Erick John B. Bonaobra | Frontend Developer

I updated the Log In page so that users can already see the Log In form. I also created the organization.html where you can see all the active organizations in BU Polangui. I also helped on managing the database with our Database manager.

Nadel B. Volante | Database Manager

During Phase 3 of IT 112, we translated our system design into a responsive frontend using HTML, CSS, and Bootstrap, ensuring alignment with the ERD and use case. Each team member fulfilled their role, and as Database Manager, I verified that frontend inputs matched the schema and were correctly stored in MongoDB while coordinating with the backend. This phase strengthened our ability to connect planning with implementation and ensured readiness for backend integration.
